

# BioSoundSCape

Matt Clark (PI)  
Sonoma State University

NASA awards: 80NSSC22K0830, 80NSSC23K1459  
NASA 21-BIODIV21-0005

# Main Co-Investigators and Collaborators

- Festus Adegbola (University at Buffalo, USA)
- António Ferraz (Jet Propulsion Lab, USA)
- Gurman Gill (Sonoma State University, USA)
- Alan Lee (BirdLife South Africa, South Africa)
- David Leland (Point Blue Conservation Science)
- John Measey (Univ. Stellenbosch, South Africa)
- Ryan Pavlick (Jet Propulsion Lab, USA)
- Leo Salas (Point Blue Conservation Science, USA)
- Fabian Schneider (Jet Propulsion Lab, USA)
- Colleen Seymour (SANBI, South Africa)
- Rose Snyder (Point Blue Conservation Science, USA)
- Wendy Schackwitz (Point Blue Conservation Science)
- Andrew Turner (CapeNature, South Africa)

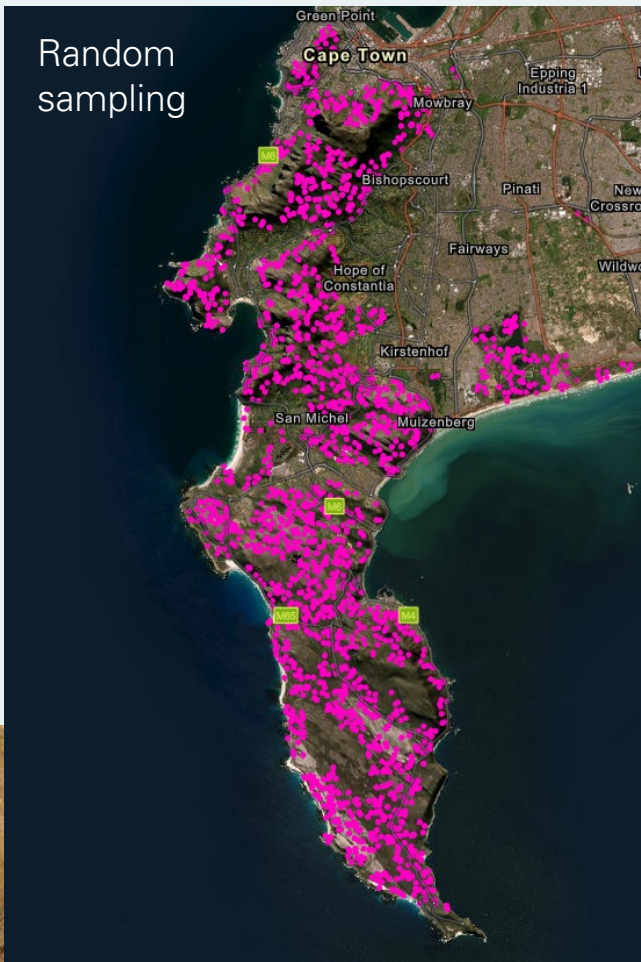

BioScape Team Meeting, South Africa, May 2023

AudioMoth recorder deployed at Jonkershoek Nature Reserve

## Objectives

- *Measure ground-based animal diversity using low-cost sound recorders across the Cape region in South Africa*
- *Scale these measurements using remotely-sensed indicators of habitat variation*

9:37

BioSoundSCape Data Collection

Name of person entering data  
Enter first and last name

Deployment Date \*  
Date

Time \*  
Time

Recorder ID \*  
Select the ID number from the AudioMoth face. All AudioMoths start with the "S2LAM" prefix.

Height of recorder  
Estimate the height of recorder in meters. Decimals are accepted.

Property name

Veld age (if applicable)  
 Young (burned, < 6 yrs)     Intermediate (6-17 yrs)  
 Old (> 17 yrs)

Survey123 app

Survey123 app

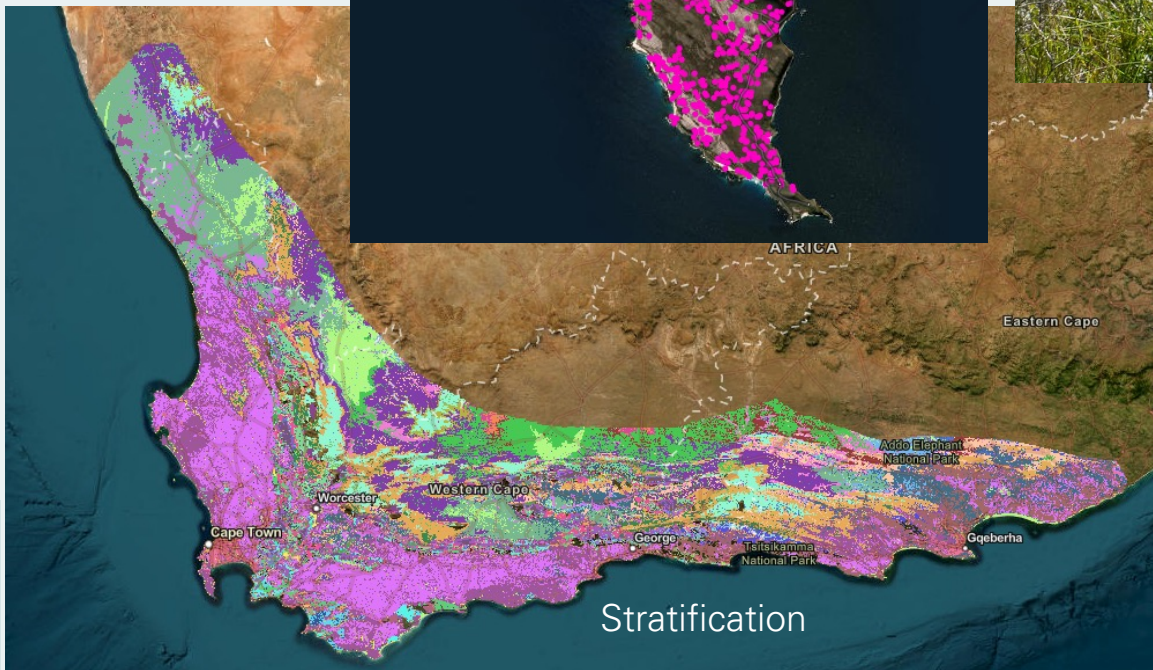

## Field Campaigns

Wet season

June to August, 2023

Dry season

October to December, 2023

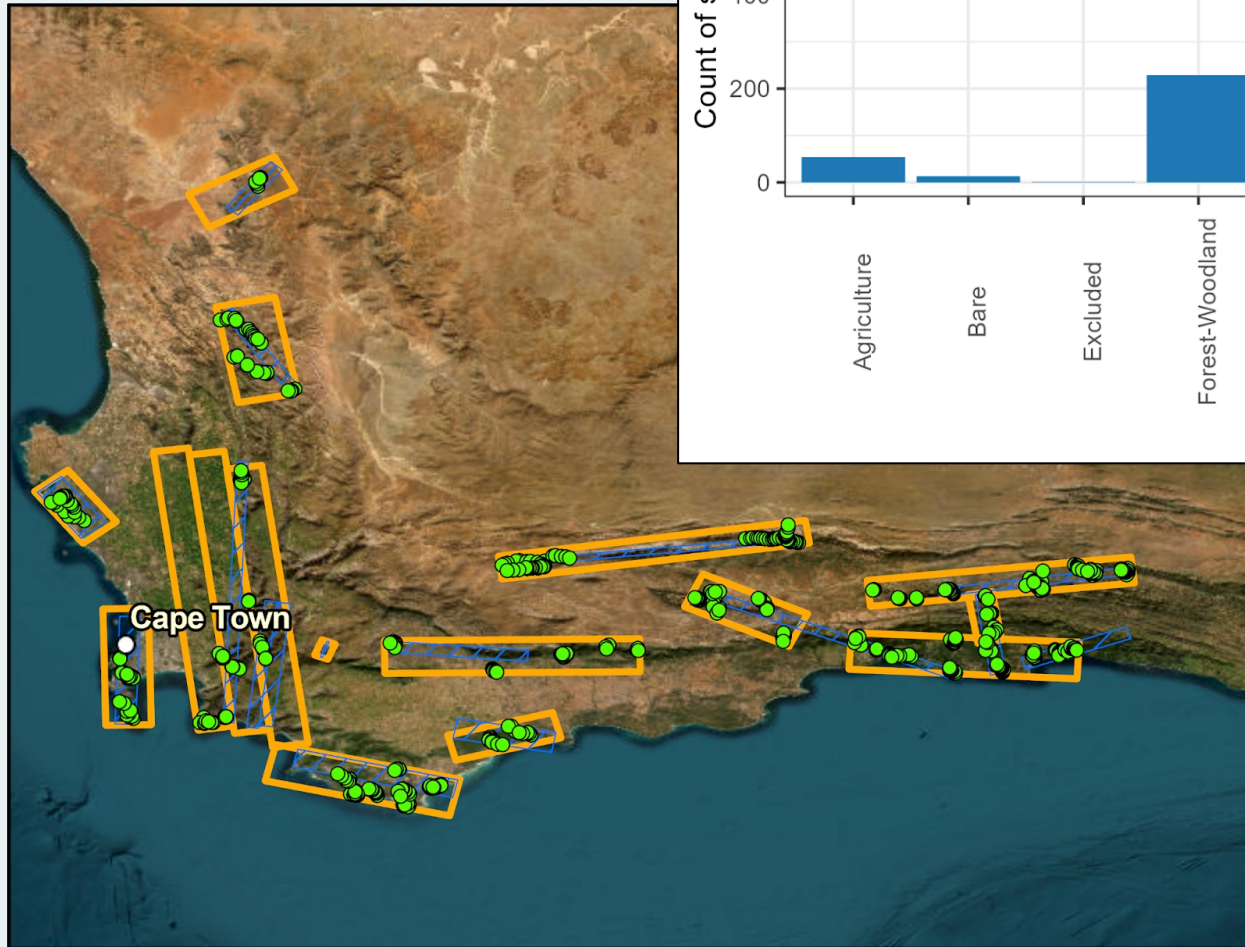

20 volunteers

21 CapeNature rangers

- BioSoundScape Acoustic Survey Sites
- LVIS flight boxes
- AVIRIS flight boxes

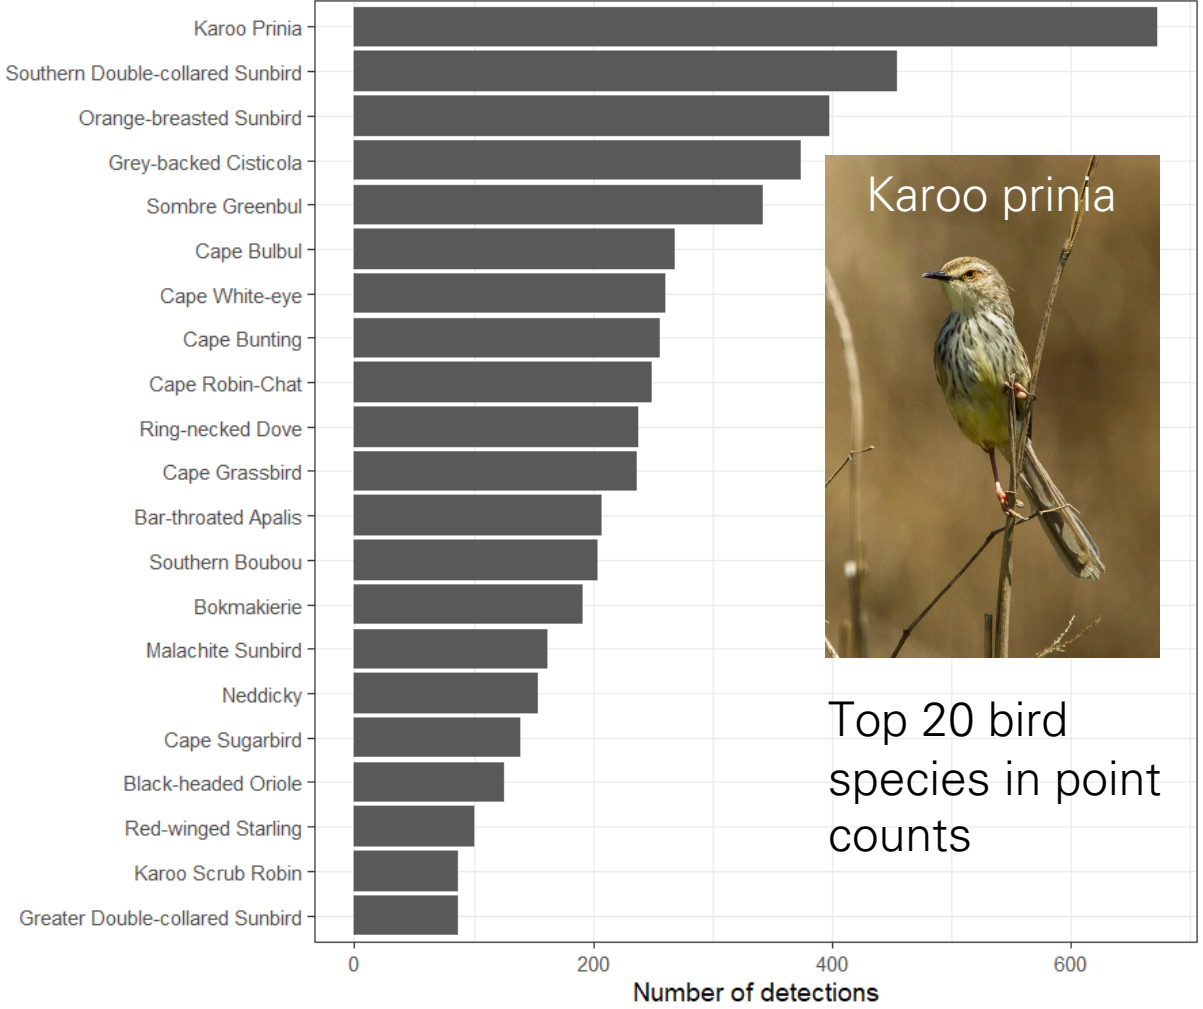

## Acoustic data

- 150 AudioMoths
- 909,309 minutes of recordings
- 538 sites in the wet season
- 543 sites in the dry season
- Most sites co-located between seasons
- All sites w/ AVIRIS, 61% w/ LVIS

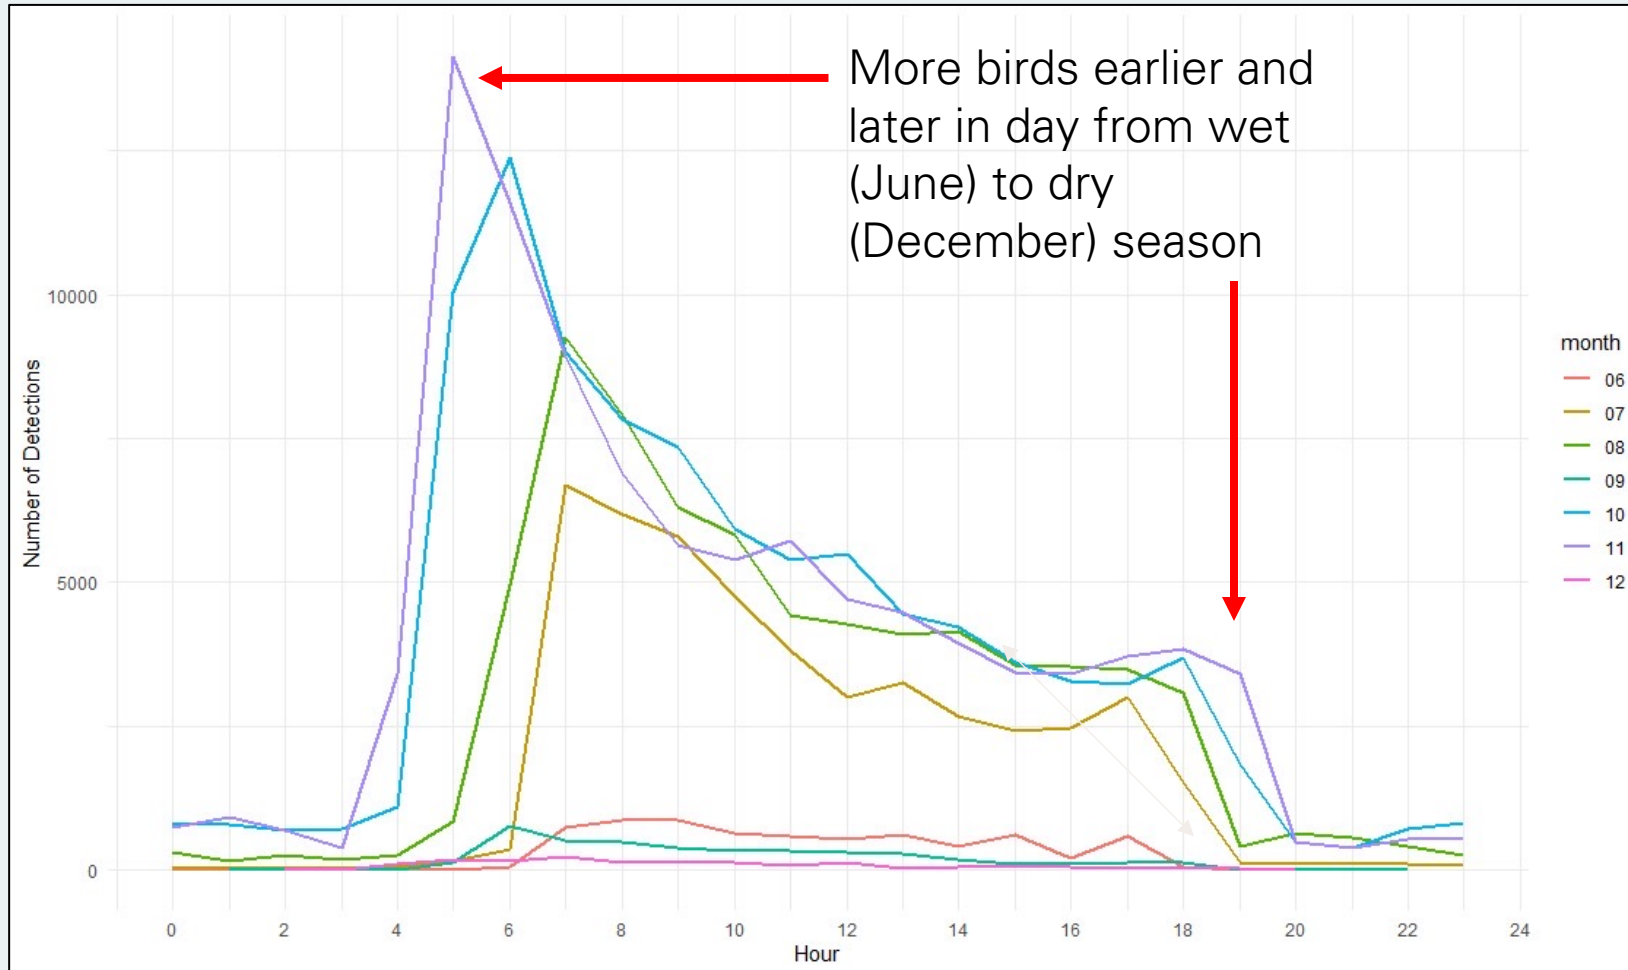

# Bird Point Counts

884 counts conducted, 8639 observations, 249 species

# BirdNET detections

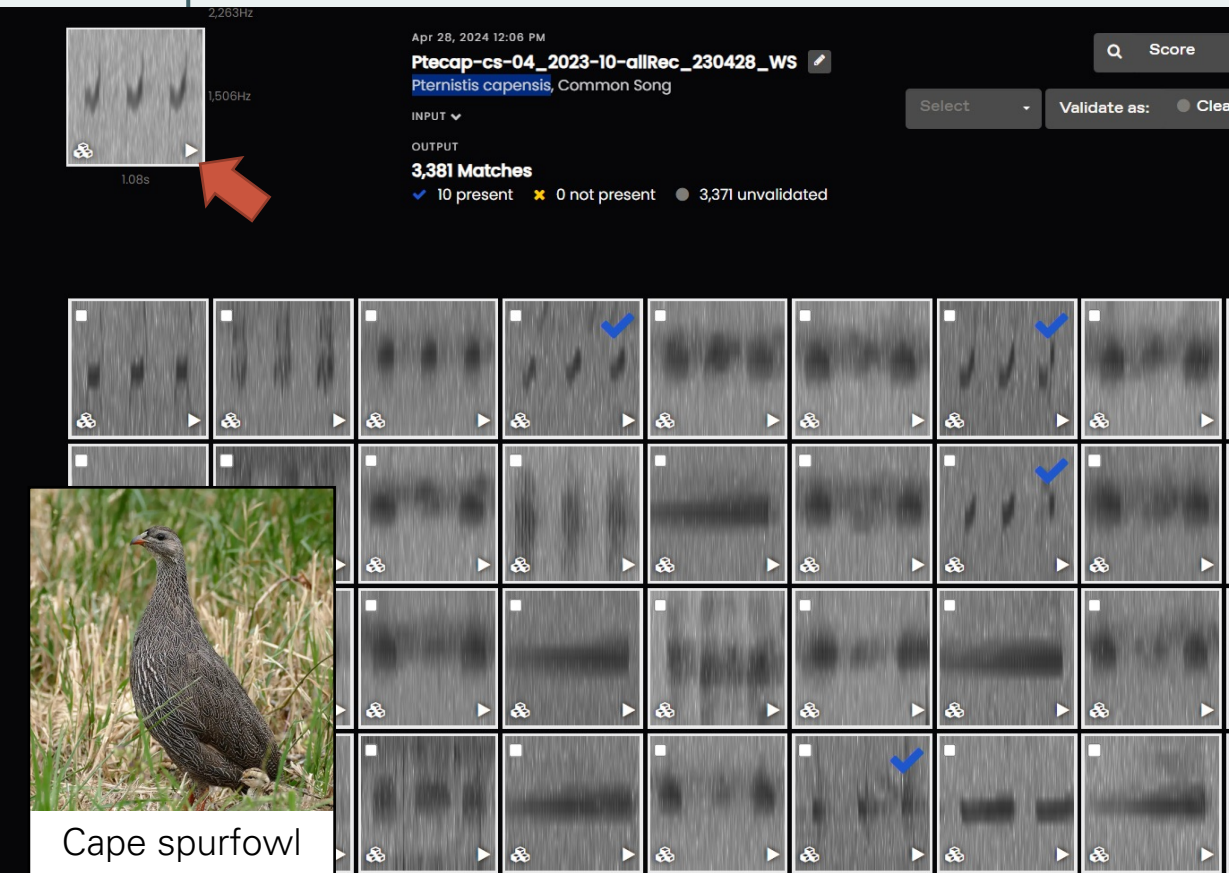

Convolutional Neural Network (CNN), aka deep learning

164 bird species

320,202 detections  
(> 80% confidence)

# Collecting reference vocalizations for training a frog and bird CNN

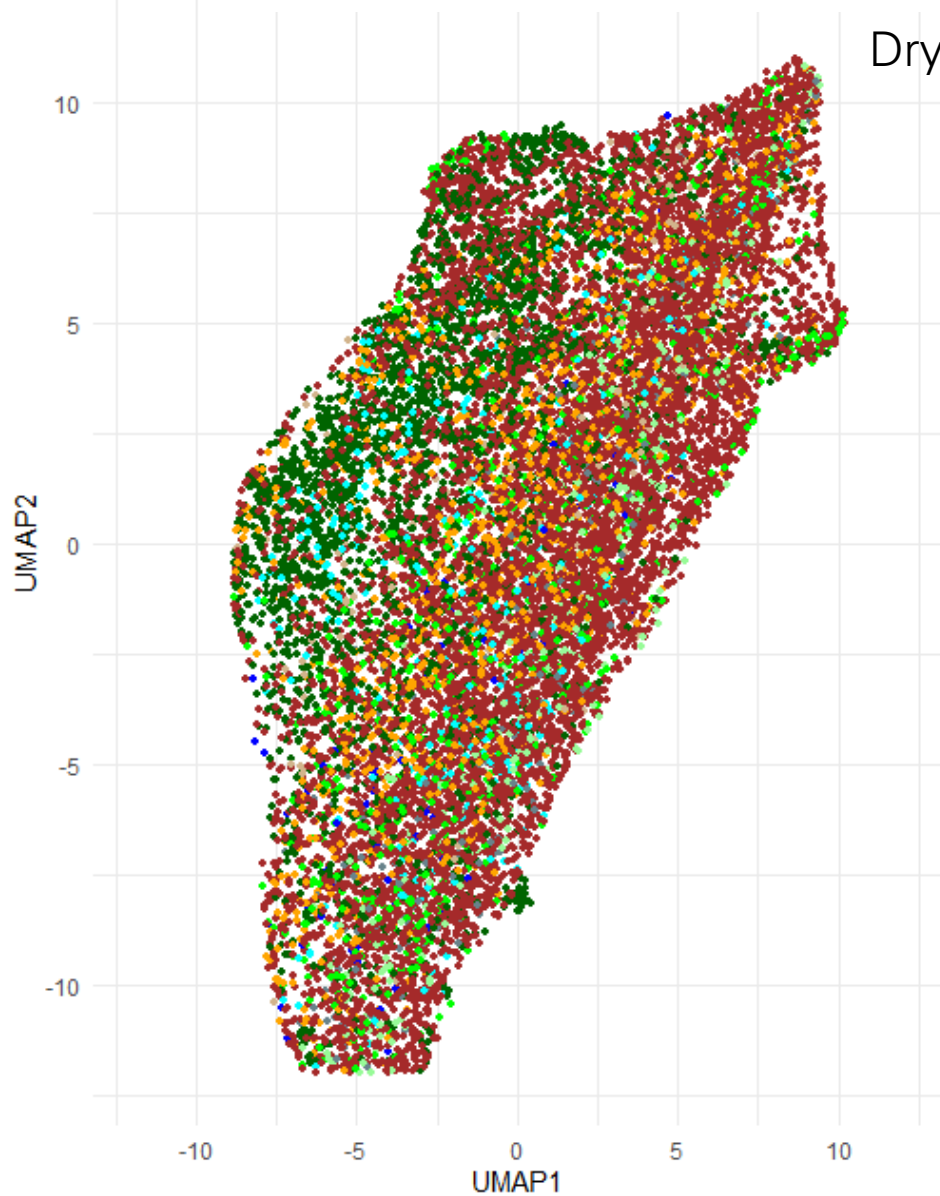

*Pattern matching in Arbimon – 15 frog, 54 bird species*

*BioBlitz at the FitzPatrick Institute of African Ornithology, Cape Town. November, 2023*

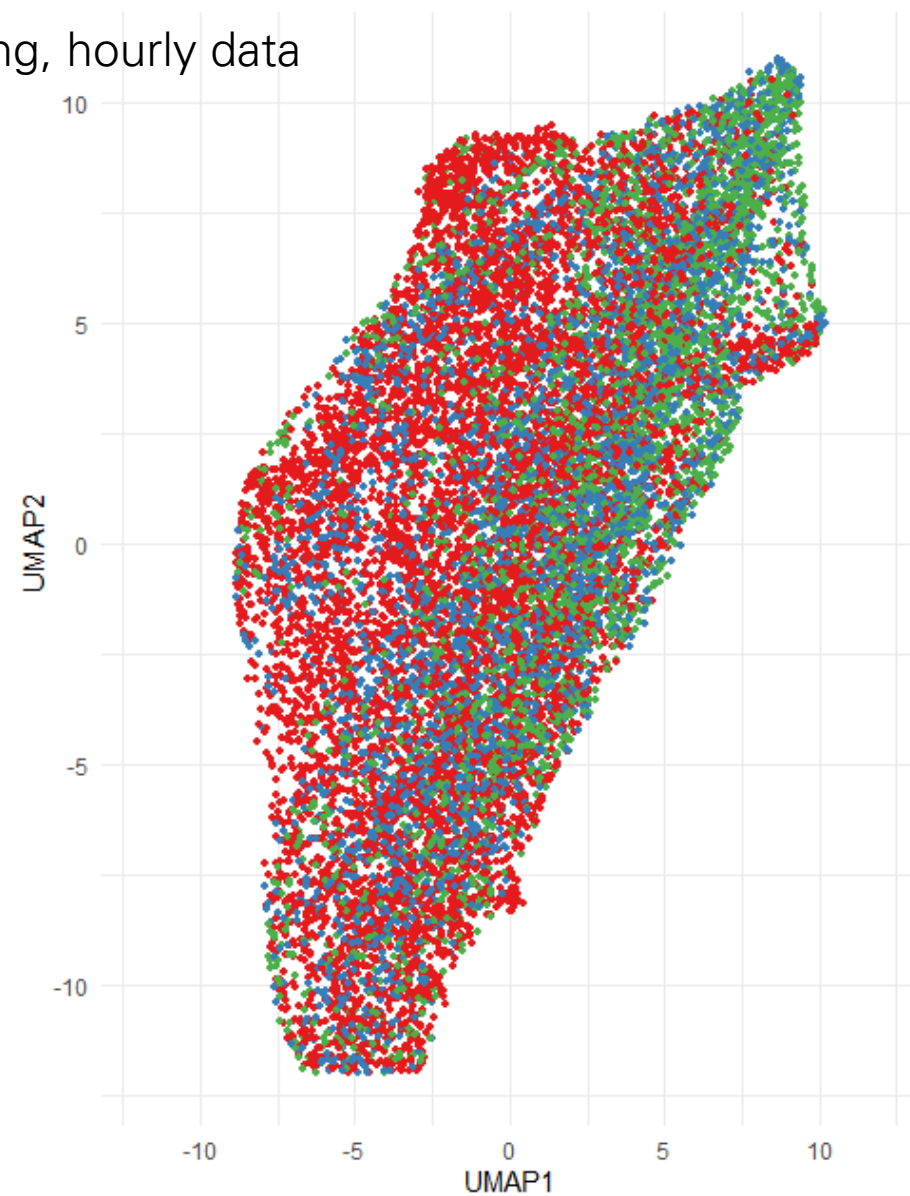

# UMAP data reduction using 15 acoustic indices

Dry season, morning, hourly data

Land-cover Class

- Agriculture
- Bare
- Forest-Woodland
- Grassland
- Shrubland
- Shrubland-Fynbos
- Shrubland-Karoo
- Water
- Wetland

Elevation Class

- Low: 0-500 m
- Medium: 500-1000 m
- High: >1000 m

# Year 3 plan

- Data paper for recordings
- Bird and amphibian CNN
- Relate acoustic diversity to estimates of *in situ* animal diversity (point counts, CNN detections)
- Relate acoustic diversity with spectral (AVIRIS NG) and structural diversity (LVIS)

Thank  
you
