

Archipelago-wide rewilding of Galápagos giant tortoises

A decision-making activity to guide archipelago-wide rewilding of Galapagos giant tortoises

End Users

Dr. Jorge Carrion,
Director of
Conservation,
Conservando
Galapagos; Advisor:
Iniciativa Galapagos /
Galapagos National
Park Directorate

Christian Sevilla, Chief:
Conservation and
Restoration of
Ecosystems,
Conservando Galapagos
National Park

Galapagos Islands

Chelonoidis spp.

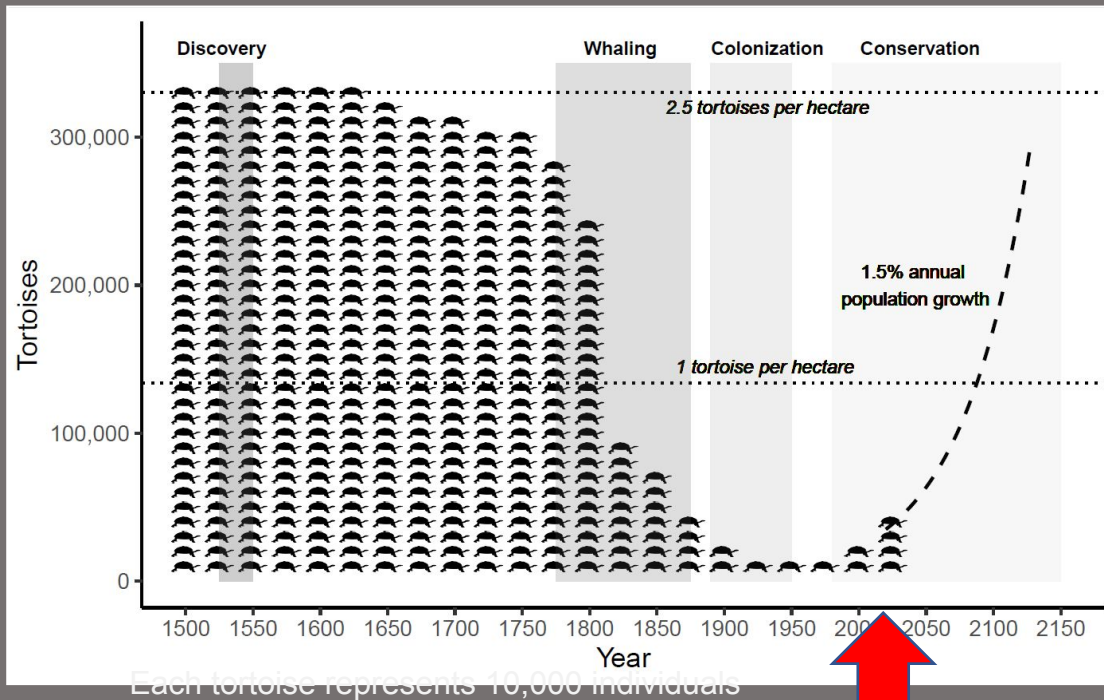

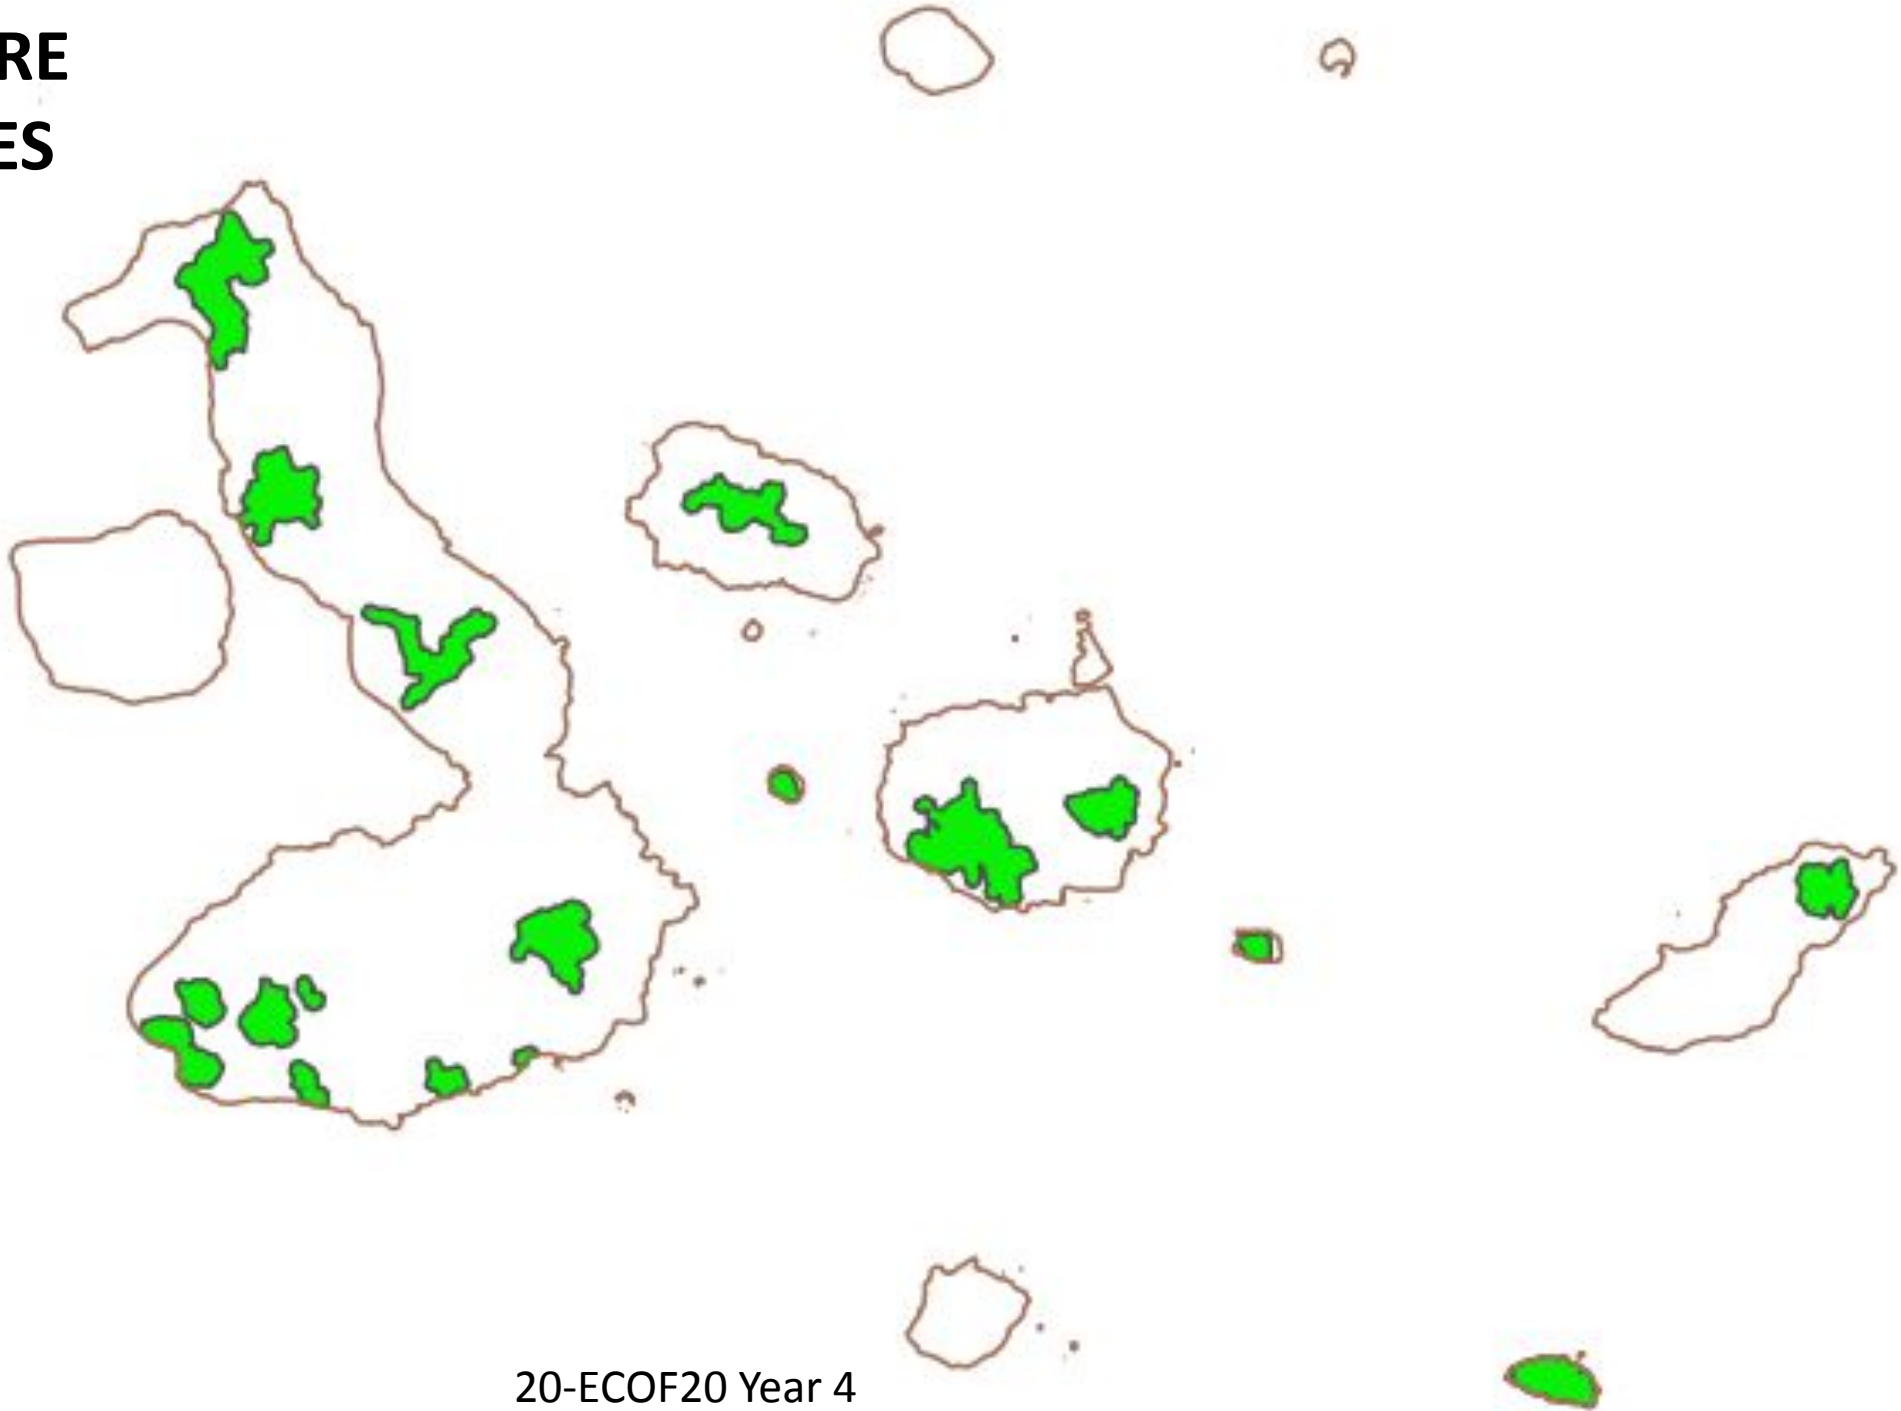

Project Motivation & End User Need

Goal: Create an integrated decision support system that will guide decision-making on the “where and when” to rewild tortoises considering:

expected future climatic conditions while meeting multiple objectives including probability of population establishment, ecosystem status, biodiversity enhancement, economic outcomes, and operational costs

WHERE ARE TORTOISES NOW?

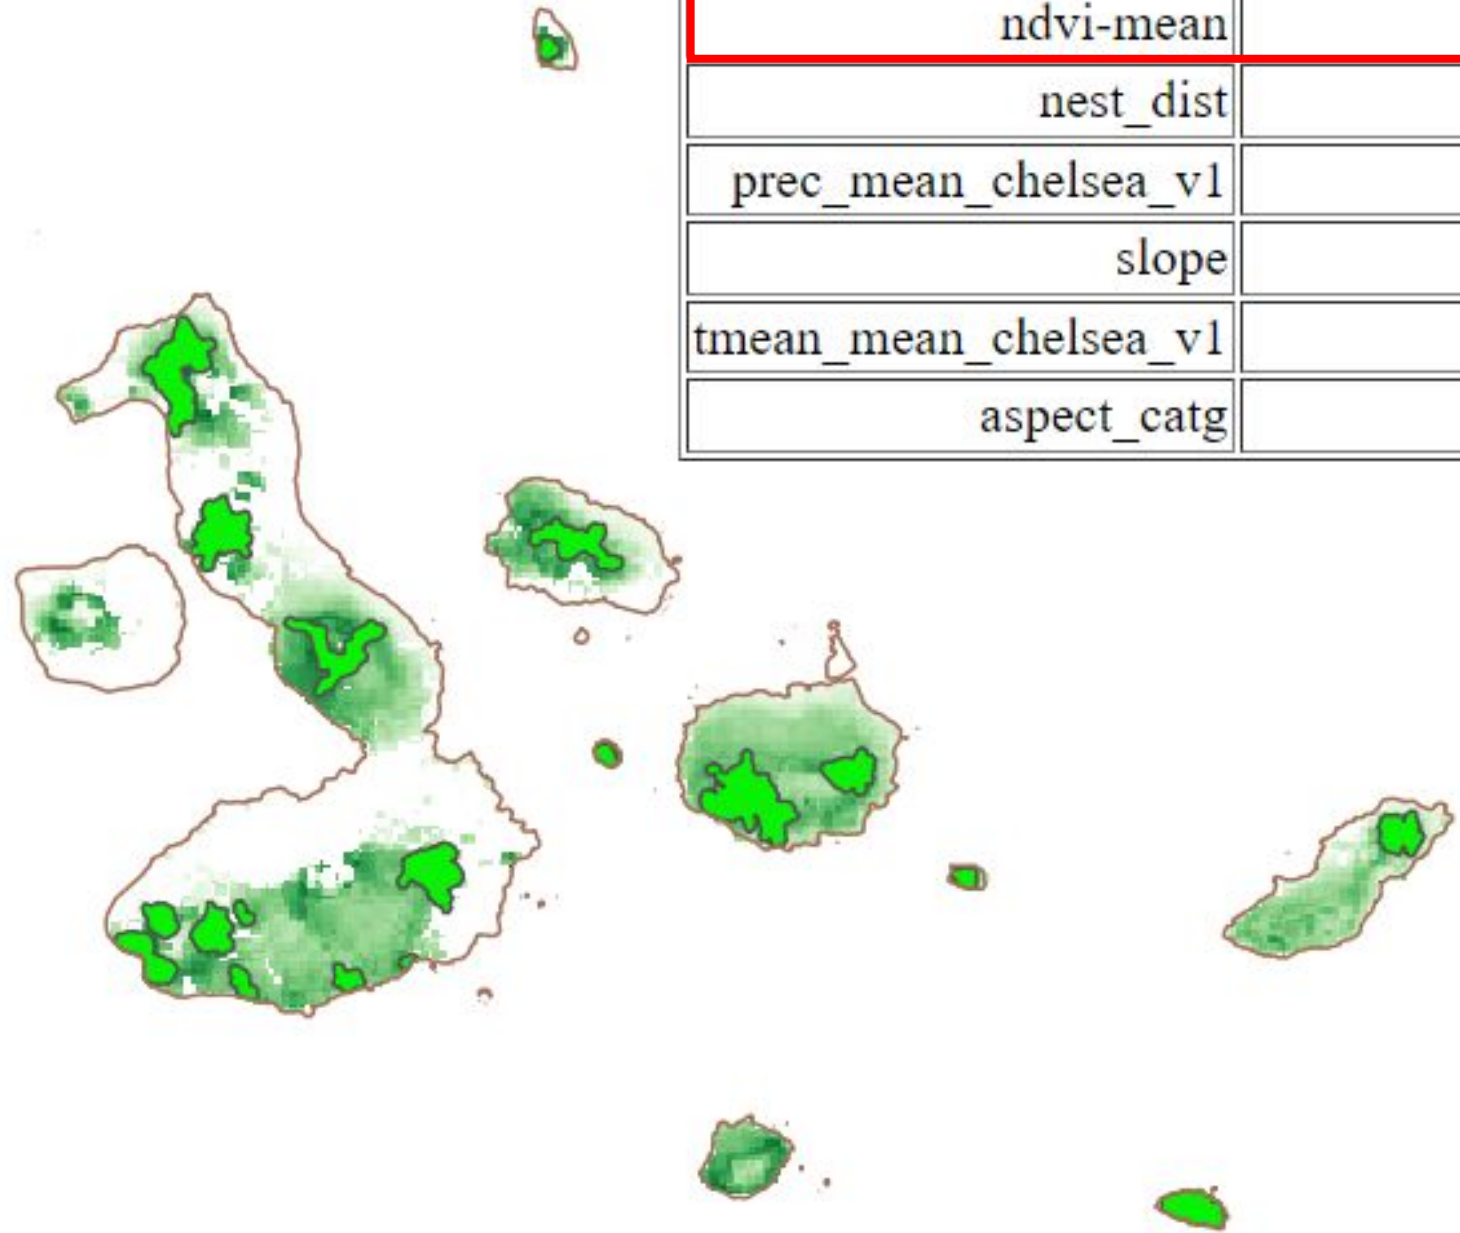

20-ECOF20 Year 4

WHERE COULD TORTISES BE REWILDED?

Species Distribution
Models

Variable	Percent contribution
ndvi-mean	59.9
nest_dist	27.3
prec_mean_chelsea_v1	3.9
slope	3.4
tmean_mean_chelsea_v1	2.8
aspect_catg	2.7

REWILDING TORTOISES INTO WHAT FUTURE?

Vegetation Prediction Model

NDVI 2080 Prediction under different RCPs

Legend

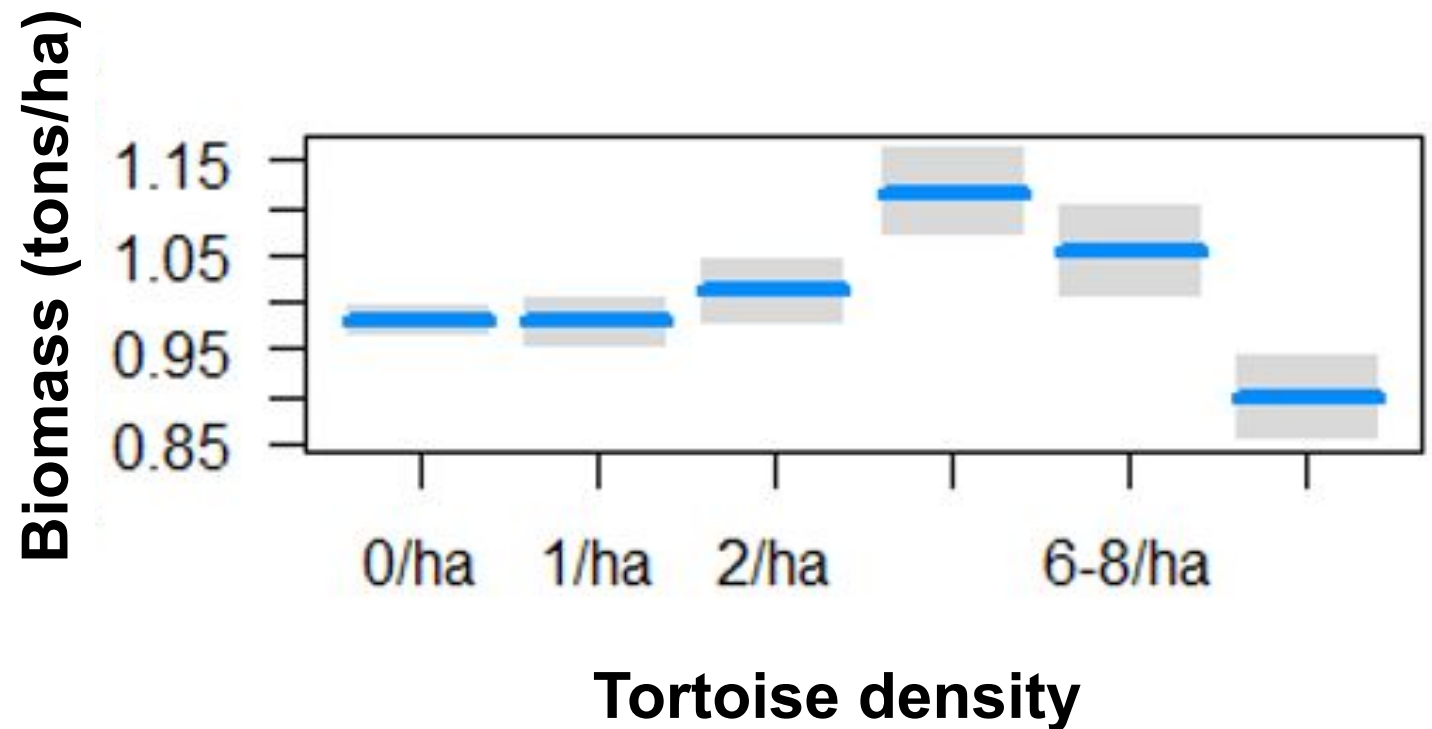

100 km

Emission scenarios: Representative Concentration Pathways
RCP26 (lowest), RCP45, RCP60 and RCP85 (highest emissions)

WITH WHAT ECOLOGICAL IMPACT?

Tortoise - Vegetation Model

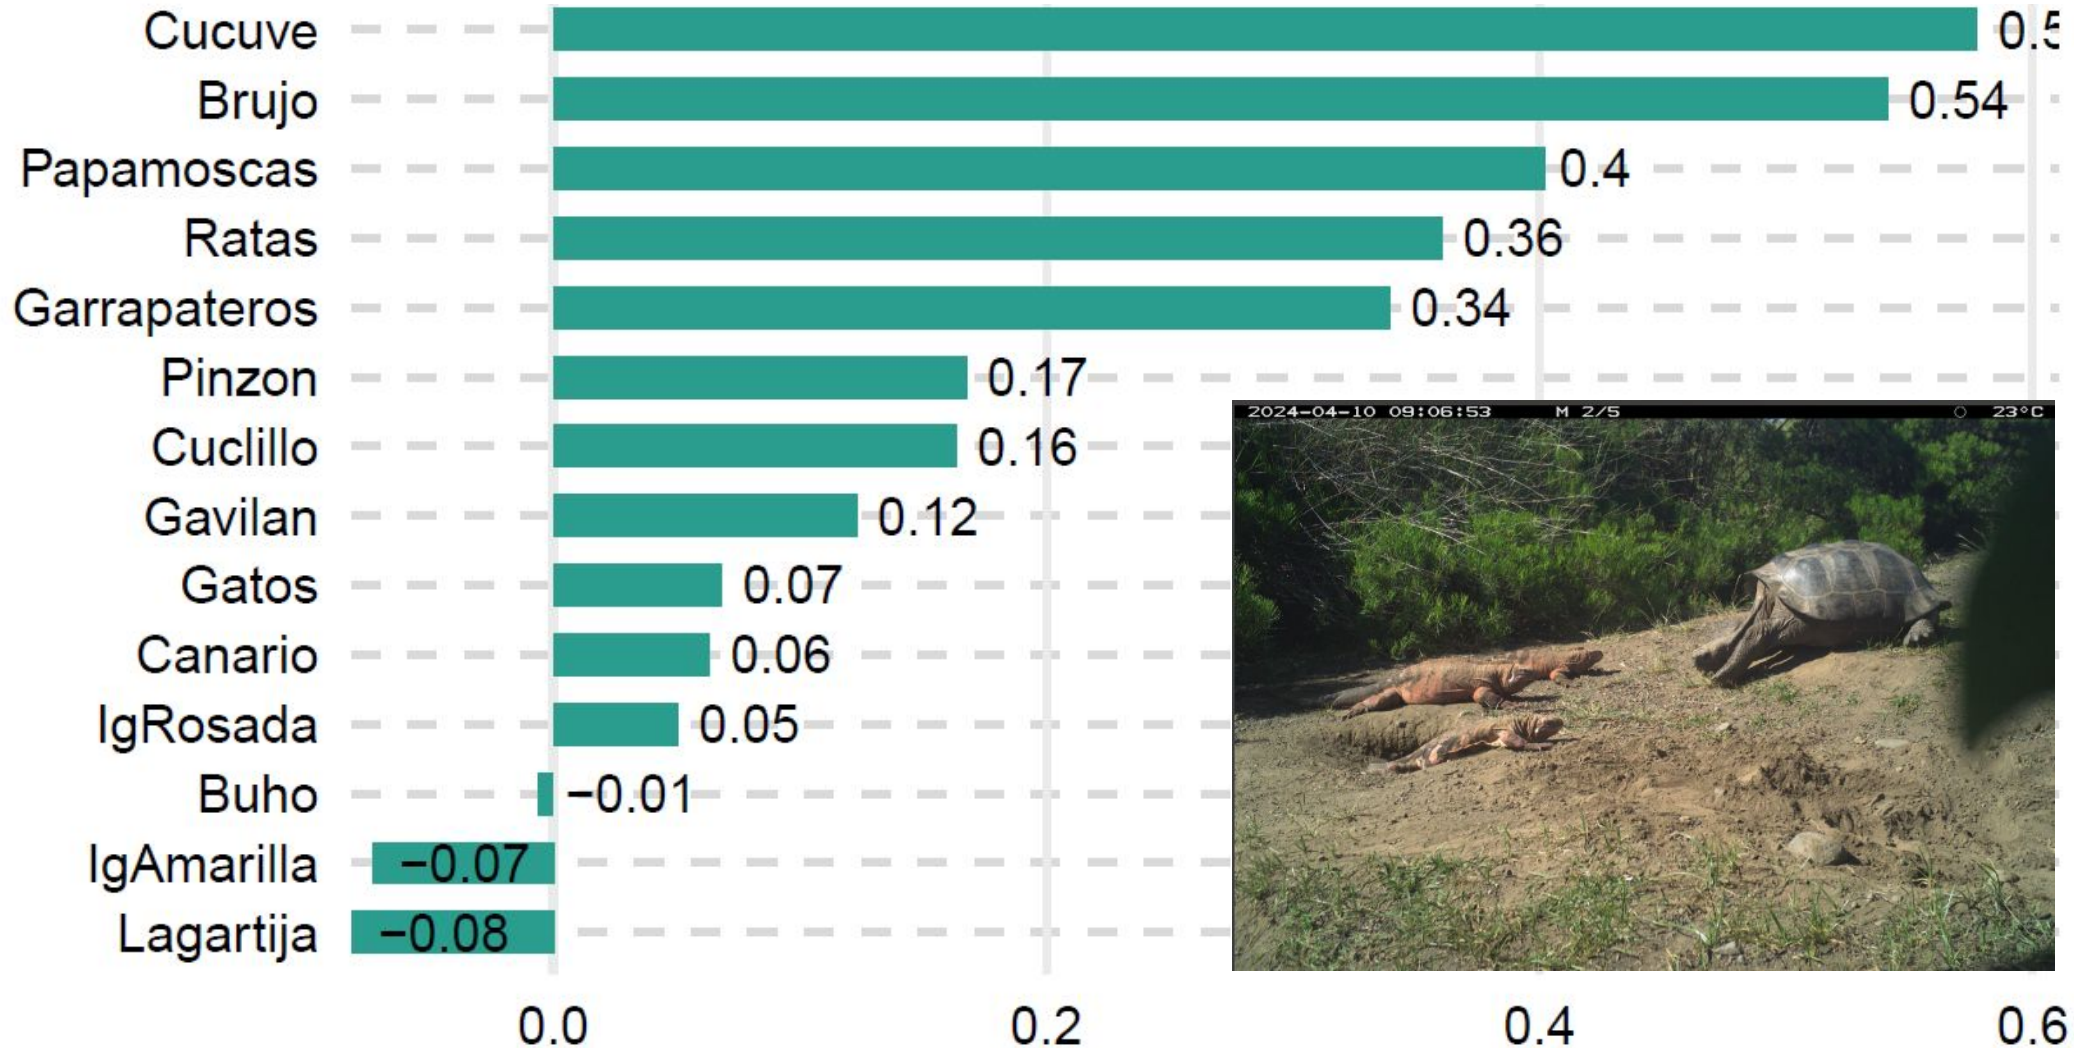

Probability of Species Occurrence if Tortoise Present

WITH WHAT
BIODIVERSITY
IMPACT?

Tortoise –
Wildlife Model

Species

Difference (psiBA – psiBa)

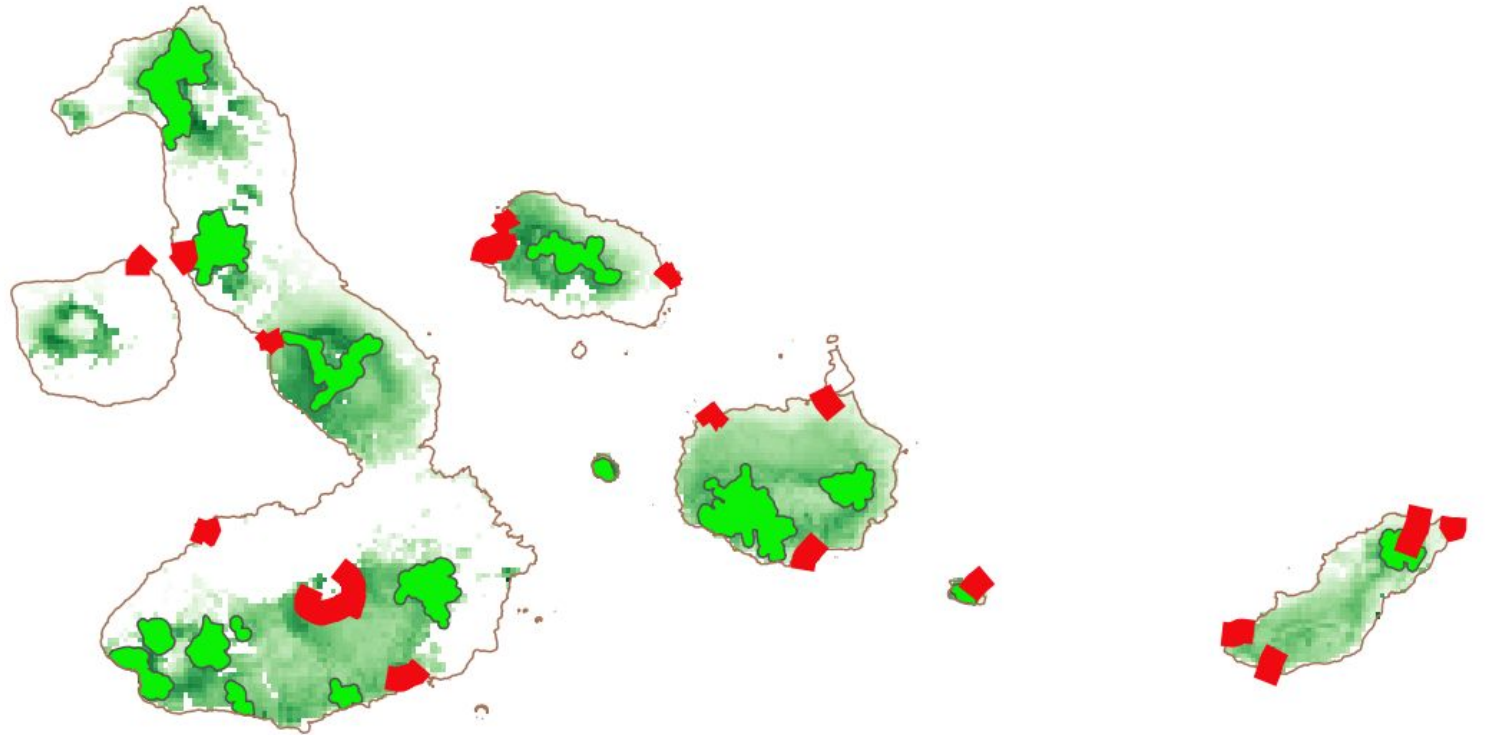

WITH WHAT ECONOMIC IMPACT?

**Tortoise
Economic
Impact Model**

**Tourism
Benefits:
% of areas near
tourist trails
with tortoises**

~10,000 images mined from Flickr, Classified with ML

AT WHAT COST?

- Captive rearing and repatriation

Costs

Captive care (US\$/tortoise/year)	Constant	190
Translocation: captivity to Floreana (US\$/trip)	Constant	10,000
Translocation: Wolf Volcano to captivity or Floreana (US\$/trip)	Constant	100,000
New corral (US\$/corral)	Constant	35,000
Genetic testing (US\$/sample)	Constant	15

- Control: cattle, dogs, goats, pigs, rats
- Anti-poaching: adults and juveniles

Deci tool

Background

The Galapagos Islands have been the focus of perhaps the largest-scale “rewilding” effort ever attempted on Earth. Over the last 60 years, > 10,000 giant tortoises have been reared in captivity and released to the wild.

Each tortoise represents 10,000 individuals
