

PACE Mission Overview & Updates

Morgaine McKibben, PhD

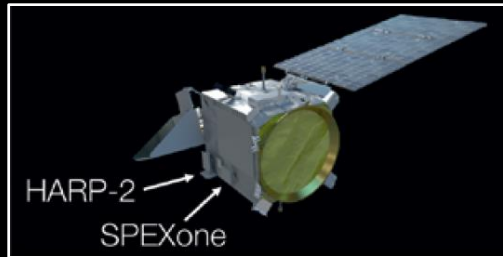

PACE Applications

NASA Goddard Space Flight Center / SSAI

May 28th, 2025

NASA Biodiversity and Ecological Conservation
Annual Team Meeting, Washington DC

Plankton Aerosol Cloud ocean Ecosystem (PACE) Observatory

Launched Feb. 4 2024

First data release April 11, 2024

- Global, 13:00 local equatorial crossing
- 3 yr mission (~10 yrs of propellant)
- Data products are free to all

Science Goals:

PACE is NASA's next great investment to advance and extend ocean biological, ecological, and biogeochemical data records, as well as cloud, aerosol, [and terrestrial!] data records.

3 instruments aboard:

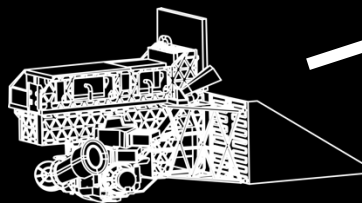

- Hyperspectral scanning radiometer, OCI
- 2 multi-angular polarimeters, HARP-2 & SPEXone

Ocean Color Instrument (OCI)

NASA Goddard Space Flight Center

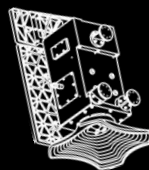

- Hyperspectral scanning radiometer
- **Spectral:** 340-890nm (UV-NIR), 5nm bandwidth at 2.5nm steps, plus 7 SWIR bands
- **Temporal:** 1-2 day global
- **Spatial:** 1.2 km² at nadir

Hyper Angular Rainbow Polarimeter (HARP2)

University of Maryland, Baltimore County

- Wide-swath, hyper-angular polarimeter
- 4 bands; 2 day global; 3 km² at nadir

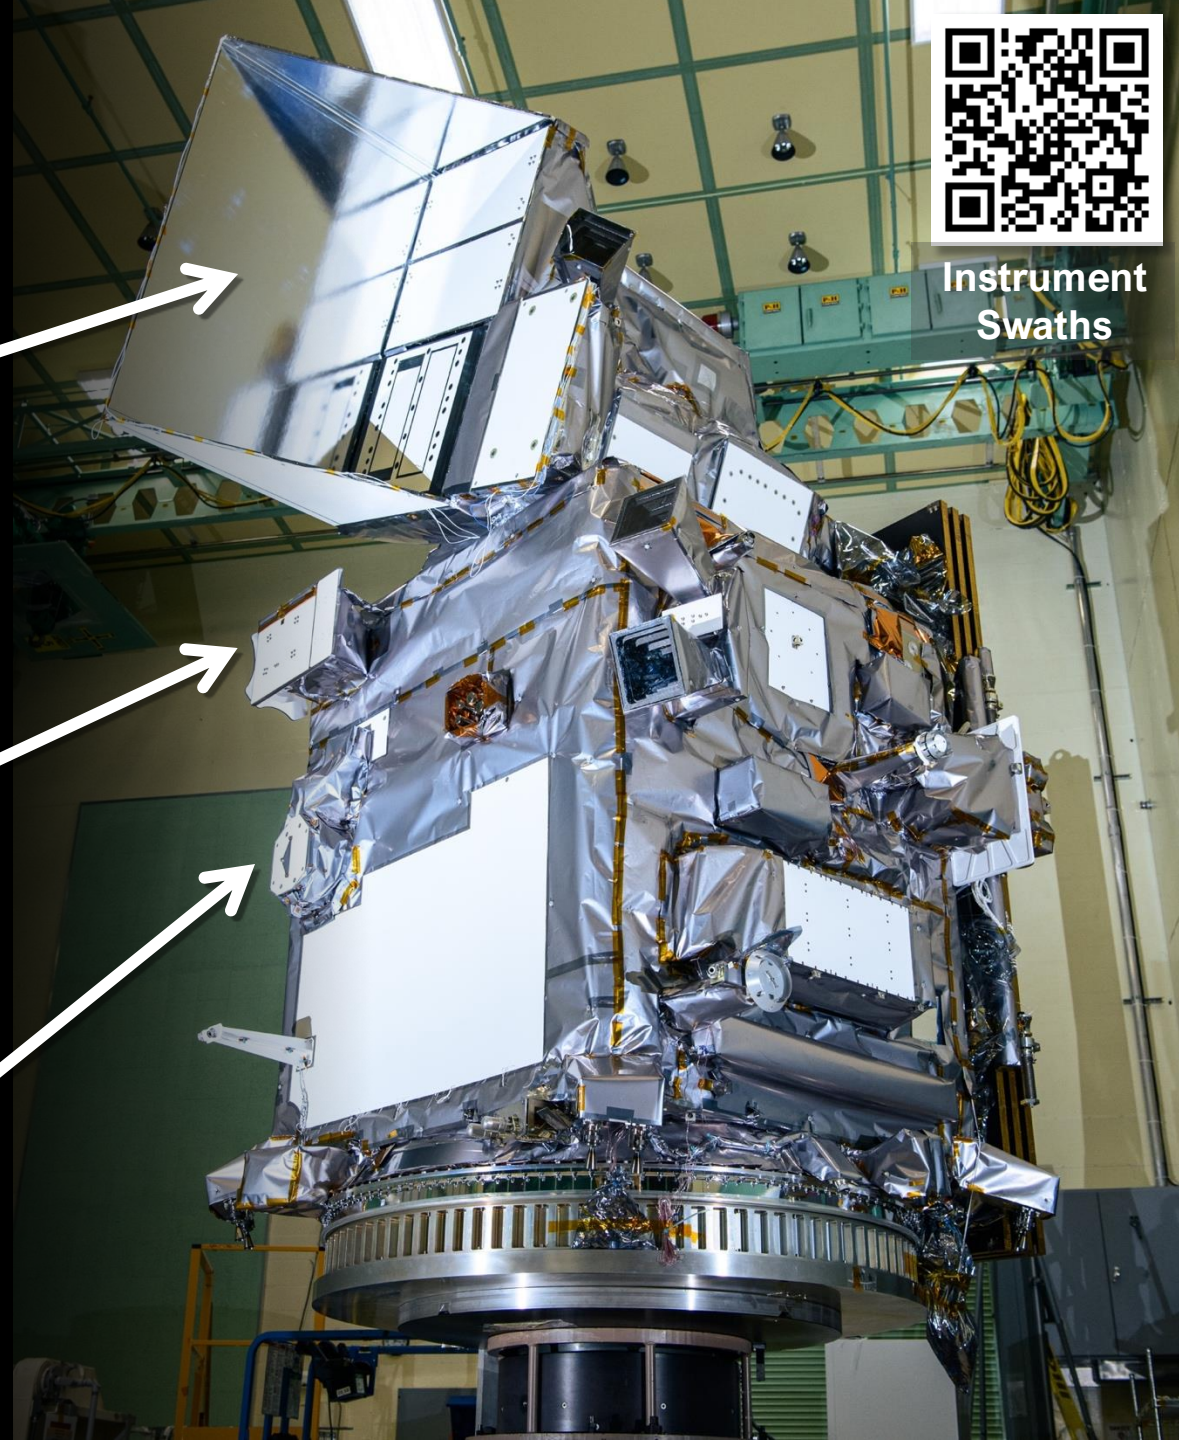

Spectro-polarimeter for Planetary Exploration (SPEXone)

SRON/AIRBUS

- Narrow-swath, hyperspectral 380-770 nm (UV-NIR), 2-4 nm steps
- 5 viewing angles, >30 day global, 2.5 km² at nadir

Instrument Swaths

PACE products support applications across water, air, and land

We provide advanced products only from PACE as well as heritage products (e.g. from MODIS)

Ocean & large inland waters

Unique Product Examples:
phytoplankton community composition, spectral remote sensing reflectance, etc

- Water quality monitoring
- Harmful algal bloom identification
- Fisheries support
- Post-disaster water quality impacts (hurricanes, wildfires, etc)

Clouds, Aerosols

Unique product examples:
nitrogen dioxide, aerosol size distribution, aerosol type, aerosol absorption

- Air quality
- Aviation
- Disasters:
 - Volcanoes
 - Wildfires

Land

Unique product examples:
enhanced vegetation indexes, spectral reflectance of land

- Terrestrial Ecosystem monitoring & management
- Agriculture
- Forestry
- Land cover type, burn area
- Continues heritage indexes such as NDVI, EVI, NDWI from MODIS

← **PACE DATA PRODUCT TABLE**

https://pace.oceansciences.org/data_table.htm

*Up-to-date list of all **currently available** & **future** PACE data products. More added over time.*

*** Not all products shown above are available yet. See PACE Data Product Table for the latest.*

PACE Data Products: Status

- **Provisional data available for coasts, large inland waters, oceans on NASA Earthdata**
- Incrementally rolling out new data products every few months; ~14 months of data available
- **Data Version 3 (early 2025):** With each version data quality and number of available data products are elevated
- **Data quality:** PACE-PAX calibration & validation field campaign in southern California (Sept '24, right images); also PACE Validation Science Team groups worldwide

BINGQING LIU, UNIV OF LOUISIANA: PACE SCIENCE & APPLICATIONS TEAM

MONITORING WATER QUALITY IN LOUISIANA

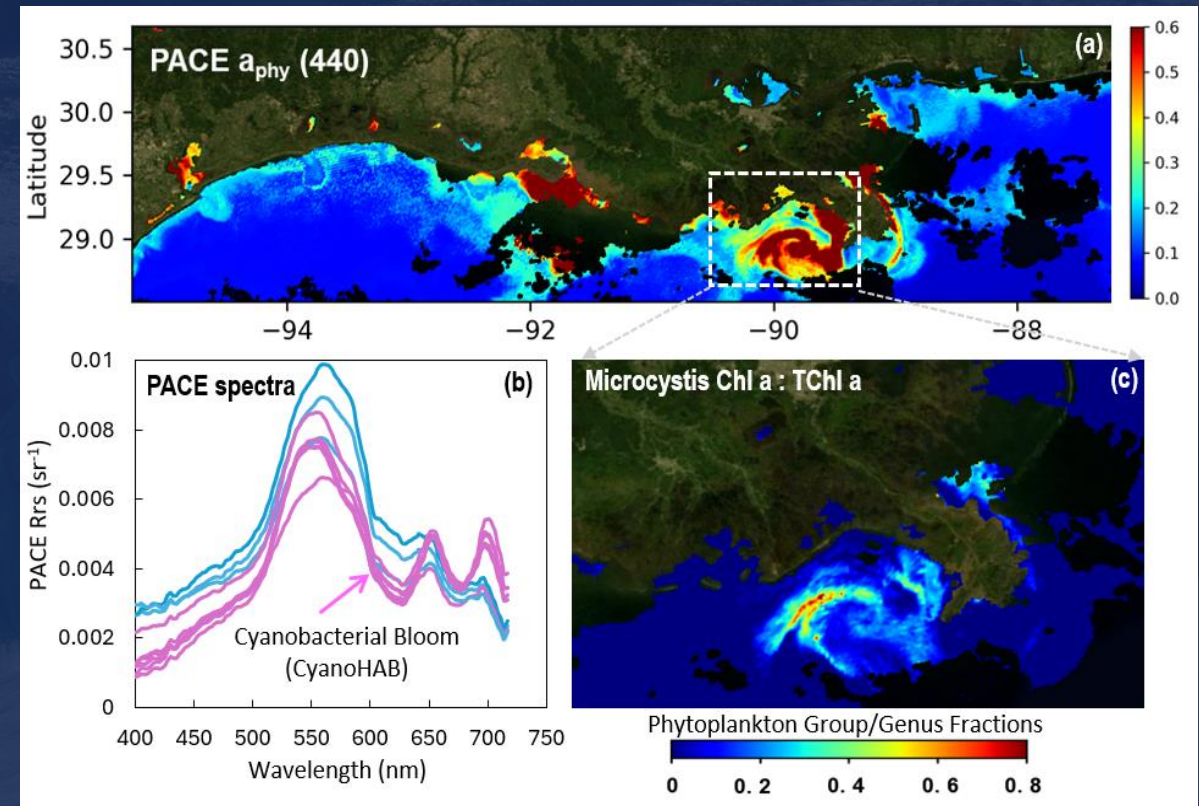

The Problem: The U.S. imports up to 85% of its seafood. Strengthening domestic aquaculture is critical for food security & coastal economies but depends on effective management of water quality risks.

The Solution: PACE provides spectral signatures of algal blooms and sedimentation, which supports aquaculture (e.g., oyster beds) operations and response to water quality risks.

An unexplained oyster die-off in January 2020, accompanied by blue-green algae bloom in Louisiana's lower Barataria Bay (NOLA.com).

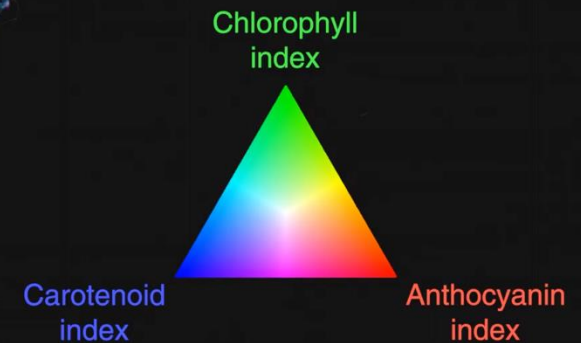

Off the southern coast of Louisiana (top image) PACE's enhanced spectral detail (bottom left) identifies a cyanobacterial harmful bloom (bottom right)

(a) PACE imagery of phytoplankton absorption at 440 nm derived from Machine learning model (Lou et al., 20) over Mississippi Delta; (b) PACE spectral signatures of CyanoHAB; and (c) Chl-a concentrations predicted for Microcystis spp.

First Year: Sub-seasonal variability in 3 hyperspectral-enabled pigment indices over the US

Mar 2024

Advanced information on vegetation type, health, and productivity.
Only PACE provides this info globally, every 1-2 days.

FRED HUEMMRICH, UMBC, PACE SCIENCE & APPLICATIONS TEAM

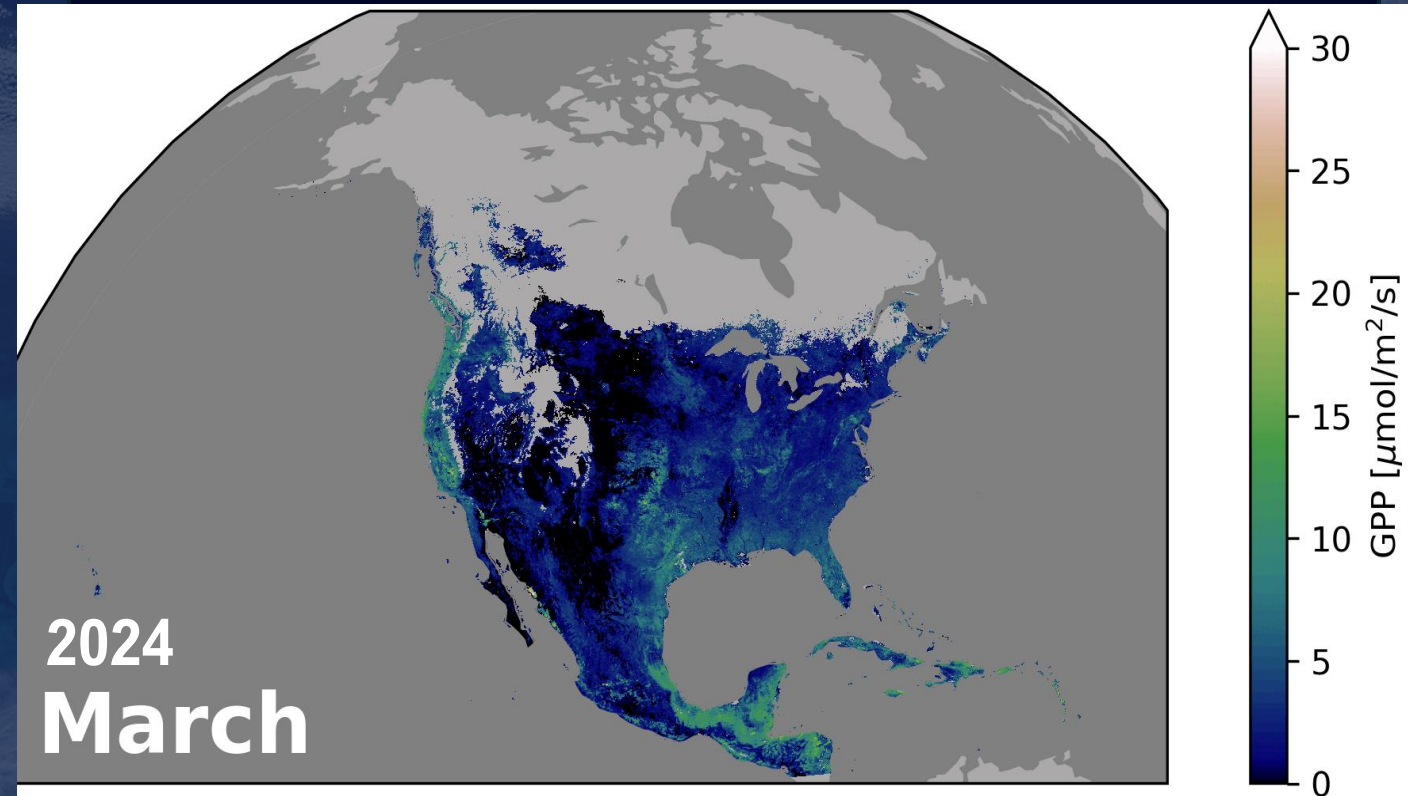

NEW TERRESTRIAL ECOSYSTEM PRODUCTIVITY ALGORITHM

Ecosystem productivity is the foundation of the food chain & the energy that provides ecosystem services.

- New algorithm relates PACE OCI spectral reflectance with gross primary production (GPP) from eddy covariance flux data from 47 towers spanning the USA's major ecosystem types
- **PACE OCI's unique data collection provides far more sites, better temporal coverage for training, and the repeated observations needed for continental scale maps.**
- GPP from PACE supports agriculture and forestry applications by independently describing seasonal and transient variability in productivity

New PACE GPP product (below), is **uniquely calculated only on spectral reflectance**, hence is an **independent measurement**, unlike previous satellite GPP models that rely on ancillary environmental data.

ZACH FASNACHT, SSAI: PACE SCIENCE & APPLICATIONS TEAM #2

NOVEL, HIGH SPATIAL RESOLUTION NITROGEN DIOXIDE (NO₂)

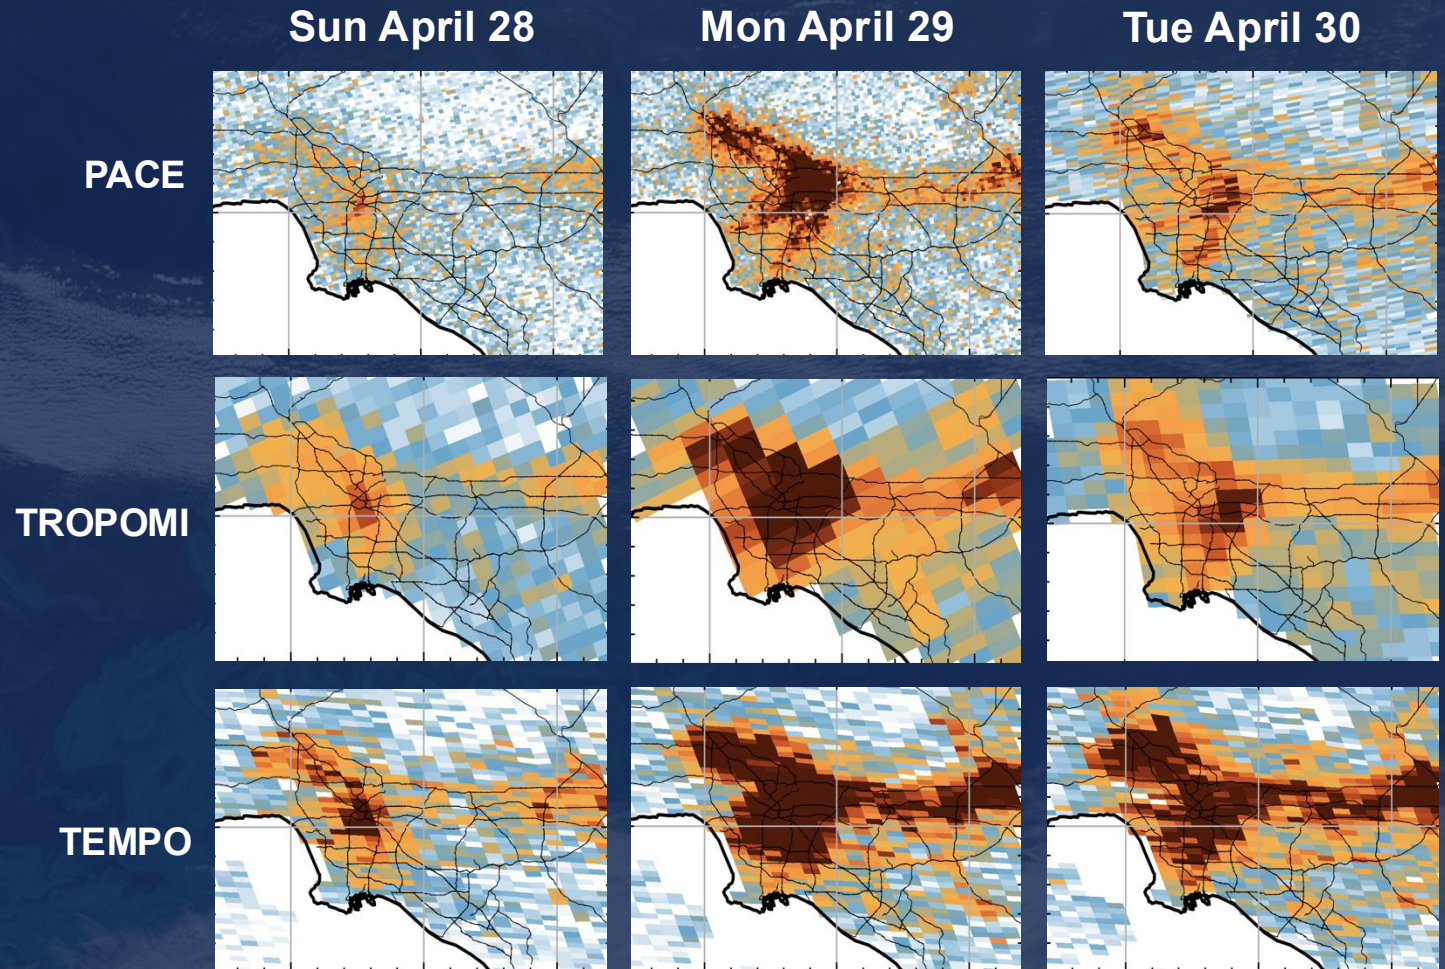

Ground-breaking, high-resolution NO₂ data: reveals emission sources at scales of individual highways (right) & point-source factory emissions that are not always visible using other satellites

Enabled by Earth observation synergy: NO₂ from PACE is made possible by machine learning using NASA's TROPOMI satellite retrievals & OCI's uniquely hyperspectral & high spatial resolution (compared to TROPOMI) observations

EXCITING NEW AIR QUALITY PRODUCT POTENTIAL

NO₂ from PACE can enable synergistic identification of emission sources (PACE OCI) and direction of plume movement (TEMPO) at uniquely high time/space scales **directly relevant to on-the-ground air quality applications needs**

PACE'S MULTI-DISCIPLINARY VIEW OF THE JANUARY 2025 LOS ANGELES WILDFIRES

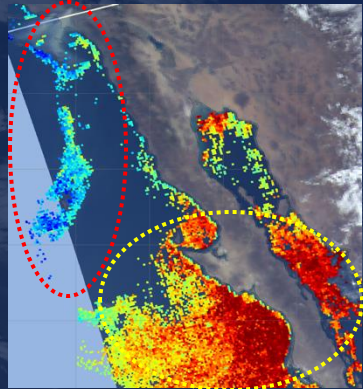

THE PACE/HARP2 MULTI ANGLE POLARIMETER MONITORS SMOKE By applying the NASA-developed FastMAPOL algorithm to HARP2's advanced data, we can distinguish between smoke and other types of atmospheric particulate pollution like dust

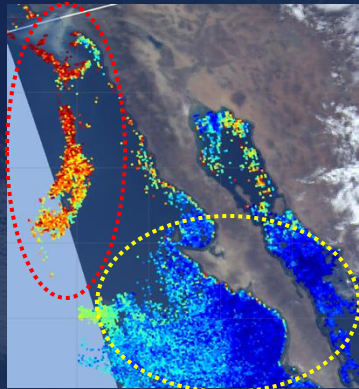

Aerosol optical depth (550nm)
(Aerosol quantity)

Single scattering albedo (550nm)
(Aerosol light absorption)

Fine mode fraction
(Dominant aerosol size)

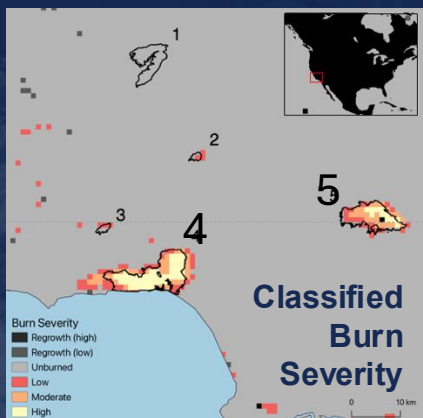

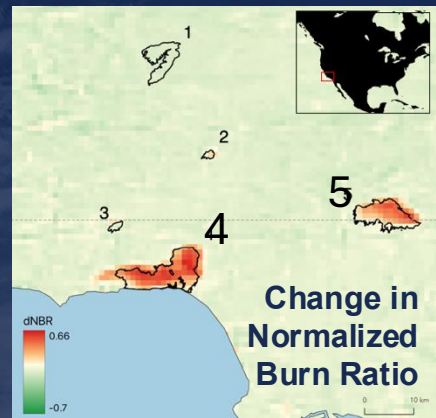

Less aerosols More aerosols

Absorbing aerosols Scattering aerosols

Small aerosols Large aerosols

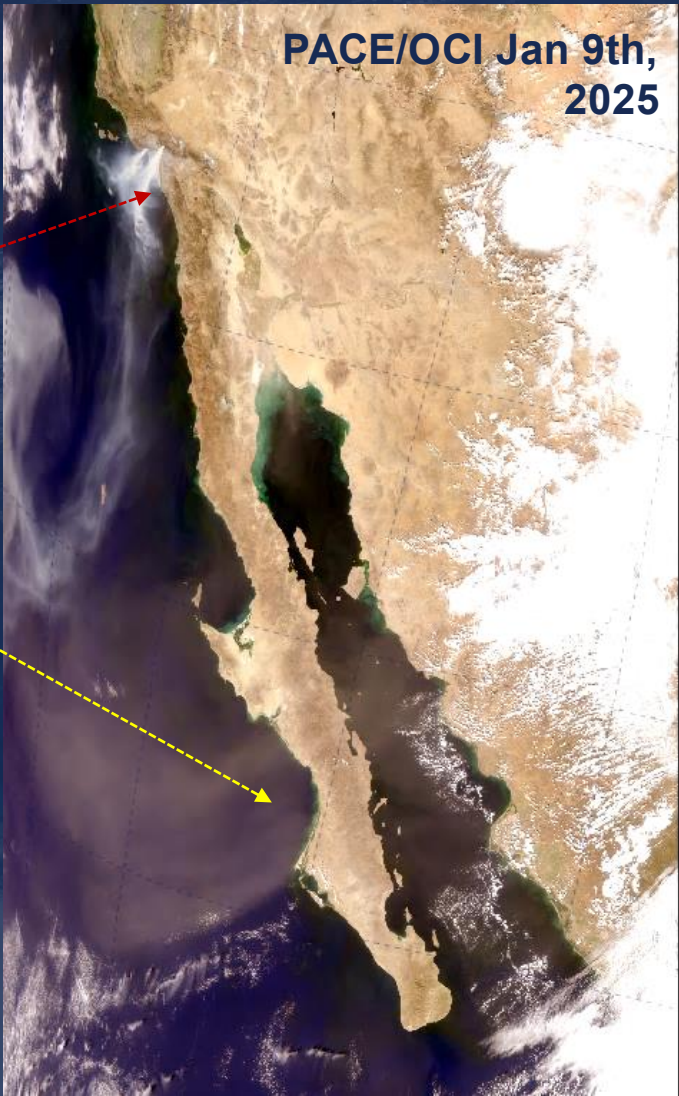

THE PACE/OCI HYPERSPPECTRAL IMAGER MONITORS BURN SEVERITY Change in Normalized Burn Ratio (dNBR) indicates burn severity. Due to PACE/OCI's global coverage and high temporal revisit, dNBR can be assessed rapidly following a fire.

- 4. Palisades Fire (1/07/2025)
- 5. Eaton Fire (1/07/2025)

Smoke

Dust

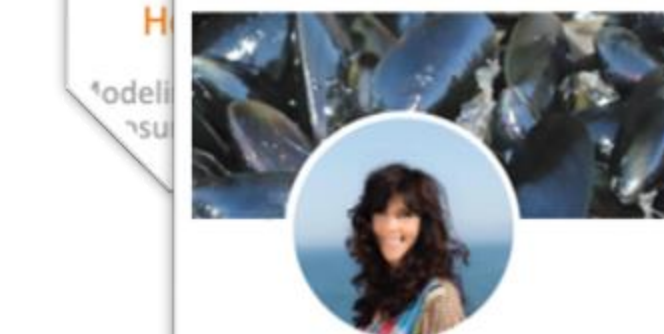

JOIN US, become a PACE Applications Partner:

- **PACE Applications works with individuals and groups across public, private, non-profit, university, etc. sectors** who are looking integrate PACE data into decision-making, business, resource management and more.
- **Does your applied project have direct health, economic, and/or other benefits to society?**
- **Partnerships specifically amplify applied research and development efforts** and accelerate the translation of PACE observations into action

Upcoming PACE Applications Events

Receive Event Updates & Access via PACE-Community mailing list

Email pace-community-join@lists.nasa.gov with “subscribe” in the subject

Events also announced at: <https://pace.oceansciences.org/events.htm>

Join our
mailing
list

July 1st, PACE Land data Users’ Group Meeting, 2-3pm ET (2nd meeting)

- Topics: PACE & GEE, GIS; PACE data conversion tutorial; guest land applications speaker

July 24th, PACE-SWOT Tutorial, 2-4pm ET

- Learn each missions’ capabilities & how they’re complimentary; gain hands-on experience with SWOT & PACE data via a live, interactive session in Jupyter Notebooks.

August 14th, PACE Community of Practice Quarterly Telecon, 2-3pm ET

- Mission & Applications Updates; PACE polarimetric data & applications

September 24th & 26th: 6th Annual PACE Applications Workshop

- Save-the-date! Virtual workshop.

Key PACE Resources: Data Access, Tutorials, Applications, Events

- PACE Data Access Page (START HERE; live page, read through, one stop for data access info):
https://pace.oceansciences.org/access_pace_data.htm
- PACE Data Product Table (live page; all current/planned PACE products):
https://pace.oceansciences.org/data_table.htm
- OB.DAAC Help Hub (Jupyter Notebooks and other tutorials for accessing & visualizing PACE data):

- PACE Upcoming Events: <https://pace.oceansciences.org/events.htm>
- PACE Applications Partners – *Join us!* https://pace.oceansciences.org/app_adopters.htm
- PACE Applications Events Archive: https://pace.oceansciences.org/event_archive/index.htm

PACE

- The next generation of space-based science & applications is here with PACE
- PACE uniquely provides global, hyperspectral coverage of the land & oceans every 1-2 days, plus hyperspectral/hyperangular polarimetry
- PACE will benefit society via **advancements in space-based applications** across land, air & water.
